Importance of Health and Wellness for Global Productivity

Health, Health Economics, Health Systems

Health >> Healthcare

Healthcare is Small

Healthcare = doctors and nurses delivering surgeries and vaccinations in hospitals and clinics.

Health is Bigger than Healthcare

Health = conditions of birth, housing, labor, education, gender rights, maternity policy, social care, nutrition, clean water.

Social Determinants are Political

Social Determinants of Health require good political choices.

Health Economics is Fundamental

How do you measure health burdens?

Clinical = Number of patients.

Disability-adjusted life year.

Economic criteria = dollars spent.

Purchasing efficiency. Healthcare spending as percentage of GDP.

Presenteeism & Absenteeism

Health Economics terms to measure productivity losses.

Health Systems and Productivity

Good Health = Good Business

Healthier employees have fewer sick days. Good health plans attract top talent.

Health is an Investment, not a Cost

Companies can consider that health is an investment in their bottom line, not a cost centre.

THANK YOU.
