

Productivity in the Age of AI and Descriptive Innovation

Florence Sulyman-Boboye

VP, Operations & People | Treepz | Co-Founder, Eazyride

Opening Thought

- "The question is no longer if AI will change how we work, it's how ready we are to evolve with it."
- How can we work smarter, not harder? And how do we empower teams to thrive in this AI-powered age?

Understanding the Landscape

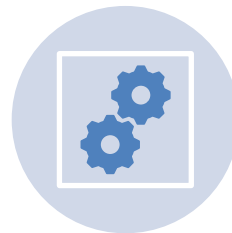

What is Descriptive Innovation?

Using data and storytelling to improve processes and customer experience.

AI + Descriptive Innovation
= Supercharged
Productivity:

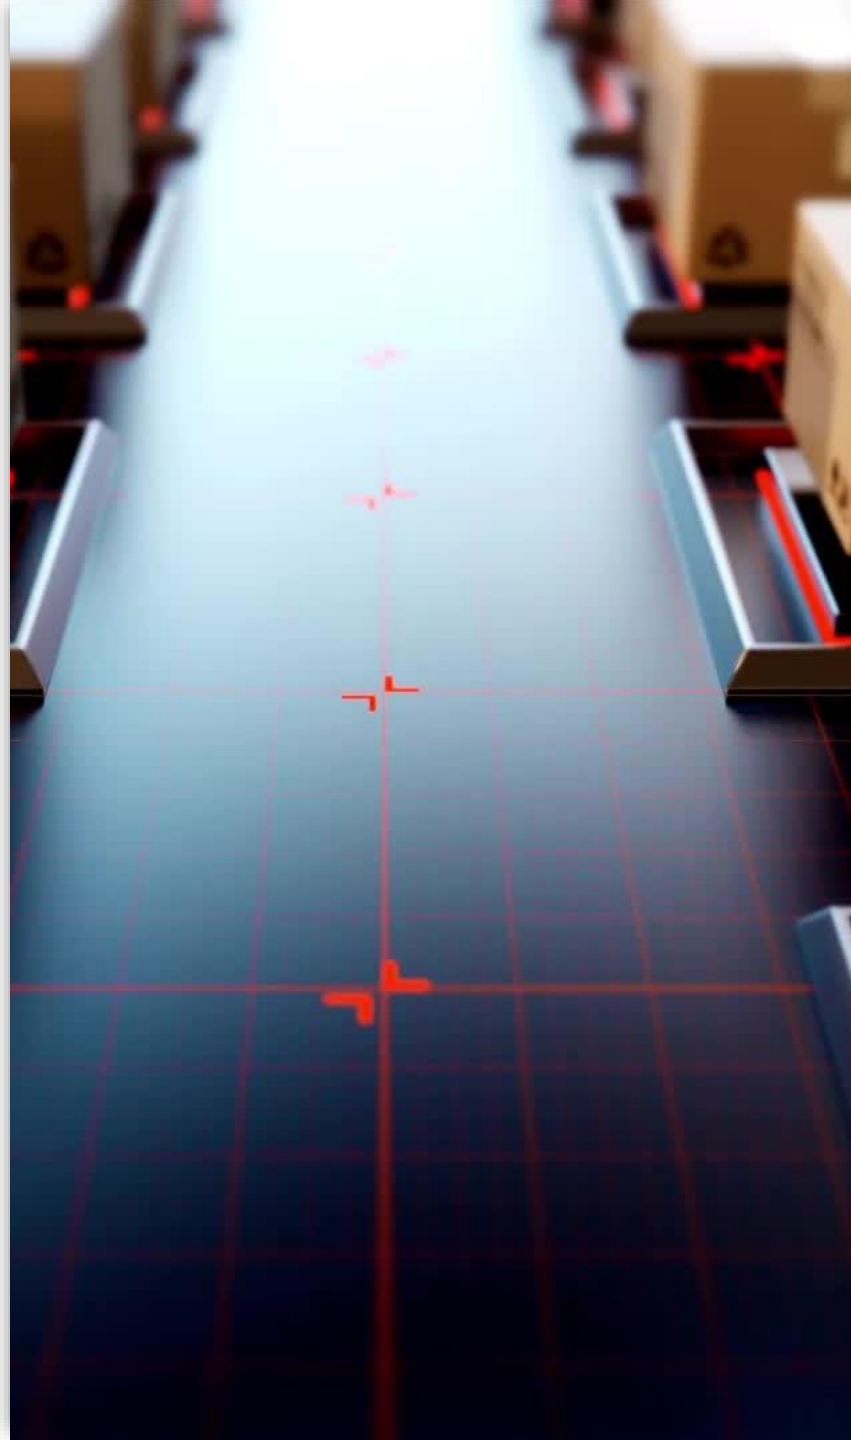

Tools that interpret,
predict, and optimize
outcomes.

My Experience with AI & Innovation

- At Treepz: predictive traffic patterns, automated support, personalized packages.
- At Eazyride: solving commuter pain points using data insights.

That's descriptive innovation at work.

How AI is Redefining Productivity

Productivity = Intentional Impact

AI enables:

- Automation of repetitive tasks
- Better decision-making with insights
- Improved team collaboration through smart tools

Lessons from the Field

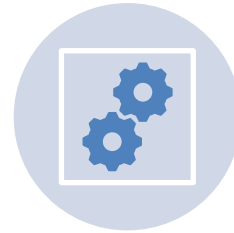

1. Tools are only as powerful as the mindset behind them
2. Train for adaptability, not just productivity
3. Stay human-centered: data + empathy = innovation

Practical Strategies

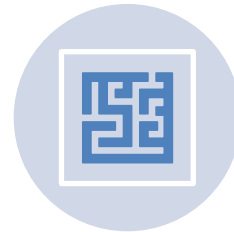

Start with a problem,
not a tool

Audit your workflow
for AI opportunities

Use dashboards that
interpret data

Co-create AI
strategies with your
team

Final Thought

AI and innovation aren't here to overwhelm us.

- They help us focus on what matters:
- Leading with empathy
- Solving creatively
- Inspiring others

Thank You

Let's build a future where productivity is not
about more, but better.
